# Statistics

By
Sharique Nawaz

# What is Statistics?

#### What is Statistics

**Statistics** is a way to get information from data.

# Why Learn Statistics?

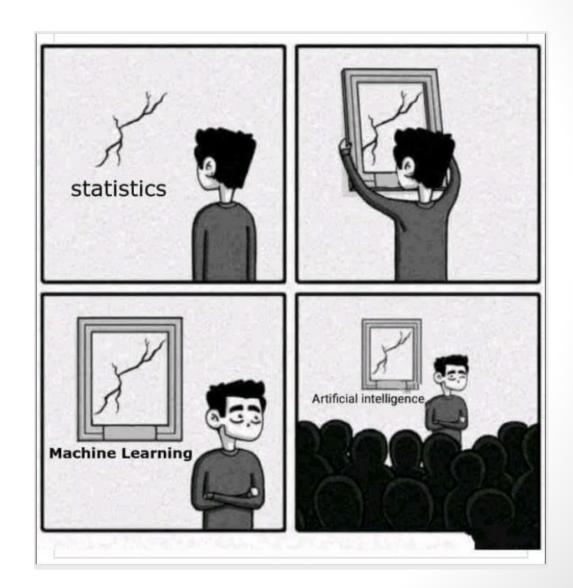

## Why Learn Statistics?

Knowledge of Statistics allows you to make better sense of the ubiquitous use of numbers.

## Statistics is ...

- 1. Collecting Data
- 2. Analyzing Data
- 3. Interpreting Data
- 4. Presenting Data

## What does it Tell?

## Classification

**Statistics** 

Descriptive Statistics

Presenting, organizing and summarizing data Inferential Statistics

Drawing conclusions about a population based on data observed in a sample

## **Population and Sample**

# **POPULATION SAMPLE**

SOLO 1 SON

## **Census and Survey**

Census: Gathering data from the whole population of interest.

For example, elections, 10-year census, etc.

**Survey:** Gathering data from the **sample** in order to make conclusions about the population.

For example, opinion polls, quality control checks in manufacturing units, etc.

#### Parameter and Statistic

**Parameter:** A descriptive measure of the **population**.

For example, population mean, population variance, population standard deviation, etc.

**Statistic:** A descriptive measure of the **sample**.

For example, sample mean, sample variance, sample standard deviation, etc.

#### **PARAMETERS**

Measures used to describe the population are called **parameters** 

#### **POPULATION**

#### **STATISTICS**

Measures computed from sample data are called **statistics**.

SAMPLE

## Statistical Notations

#### **Greek – Population Parameter**

Mean  $-\mu$ 

Variance –  $\sigma^2$ 

Standard Deviation - σ

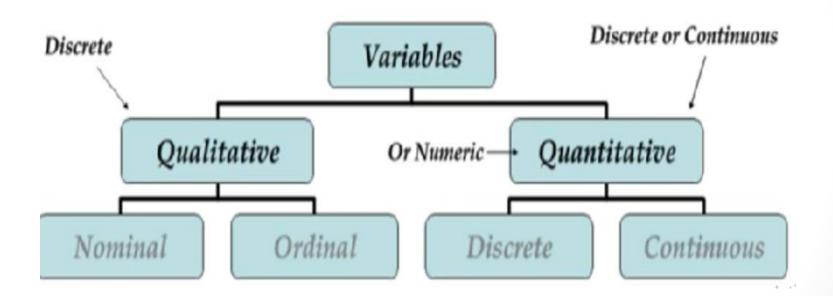

#### Roman – Sample Statistic

Mean  $-\bar{x}$ 

Variance – s<sup>2</sup>

Standard Deviation - s

## Variables

## Categorical Data (Qualitative)

#### Nominal Examples

- Employee ID
- Gender
- Religion
- Ethnicity
- Pin codes
- Place of birth
- Aadhaar numbers

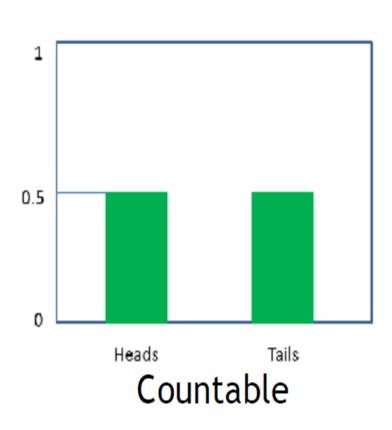

#### Ordinal

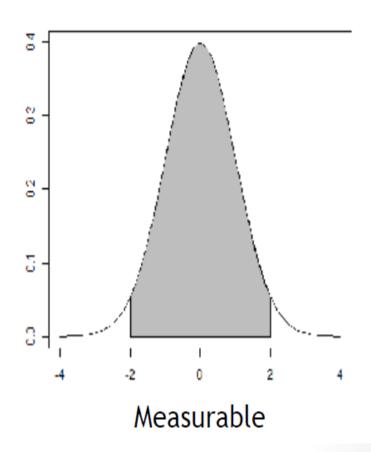

#### Examples

- Mutual fund risk ratings
   Fortune 50 rankings
- Movie ratings

While there is an order, difference between consecutive levels are not always equal.

## **Discrete and Continuous**

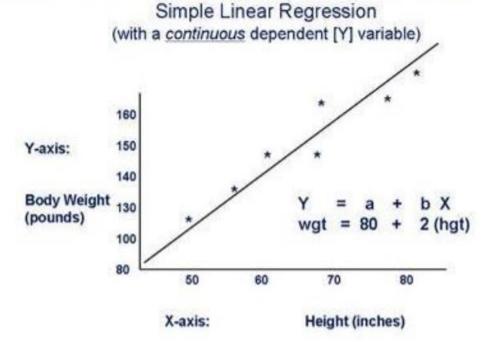

## Variables - Dependent and Independent

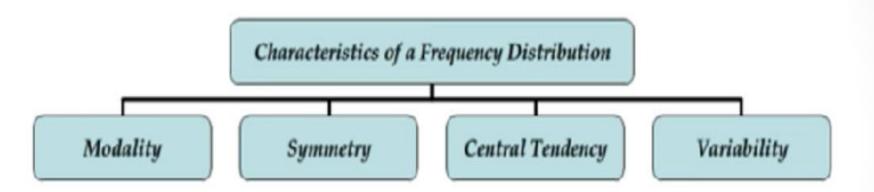

Dependent variables on y-axis and Independent on x-axis.

Dependent variable also called Target variable or Class

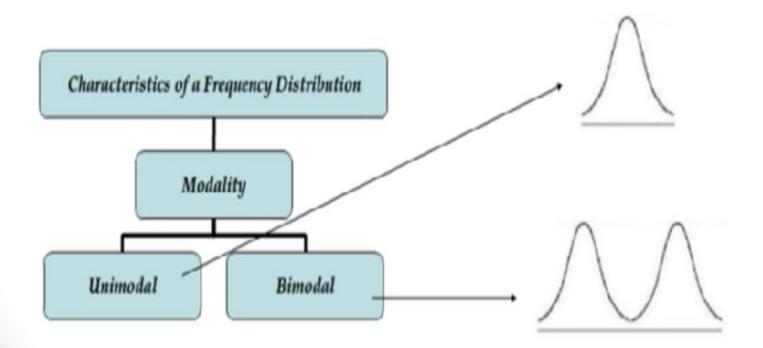

variable.

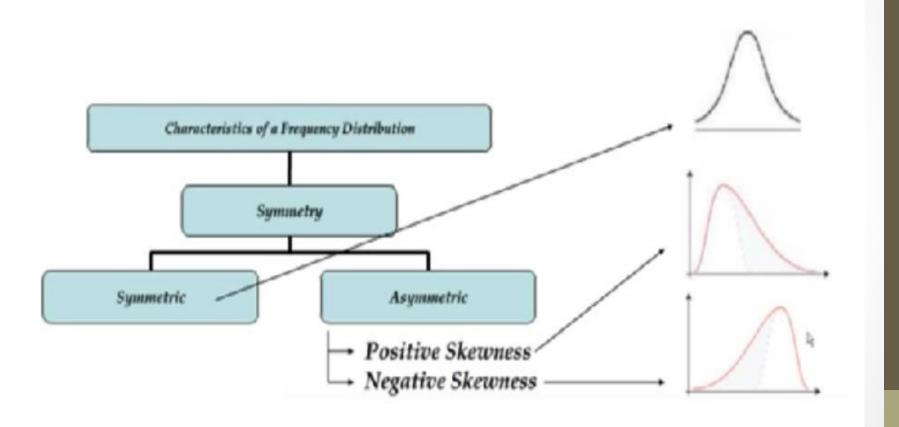

# Summarizing Data

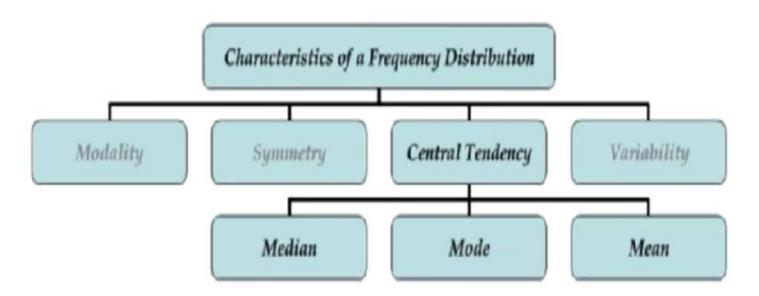

# Modality

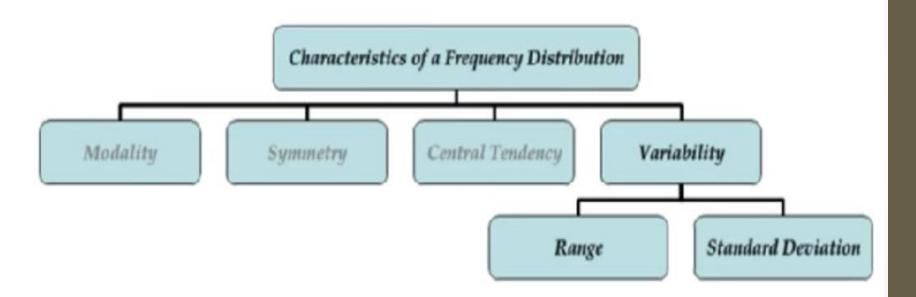

# Symmetry

# Central Tendency

# Variability

## Central Tendency

A measure of **Central Tendency** is a single value that attempts to describe a set of data **by identifying the central position** within that set of data. In other words, the Central Tendency computes the "center" around which the data is distributed.

The reliable quantity

# Mean

Mean, 
$$\mu = \frac{\Sigma x}{n}$$

Alan went for a trek. On the way, he had to cross a stream. As Alan did not know swimming, he started exploring alternate routes to cross over.

Suddenly he saw a sign-post, which said "Average depth 3 feet". Alan was 5'7" tall and thought he could safely cross the stream.

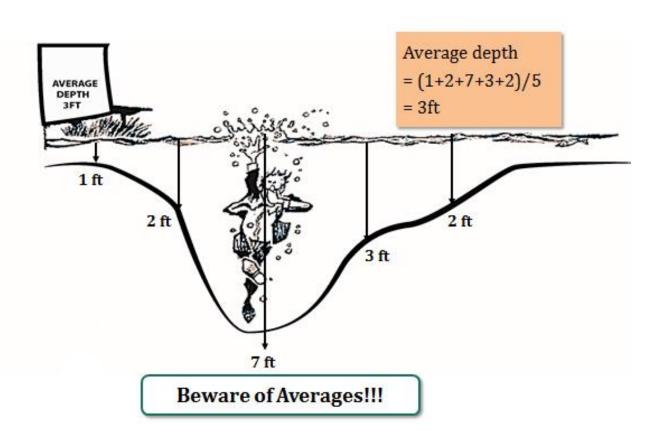

Alan never reached the other end and drowned in the stream.

### Why did Alan Drown?

#### Why did Alan Drown?

#### The "Hotshot" Sales Executive

Kurt works as a sales manager at vsellhomes.com. In the monthly sales review, Kurt reports that he will achieve his quarterly target of \$1M.

Kurt claims his average deal size is \$100,000 and he has 10 deals in his pipeline. Kurt's boss Ross is very delighted with his numbers.

At the end of quarter, even after closing 8 deals Kurt fails to meet his target number and falls short by more than \$500,000.

#### Discussion

#### The Reality of the "Hotshot" Salesman

- Average deal size in pipeline
  - = \$100,000

| Deal # | Deal Value | Deal Status |
|--------|------------|-------------|
| 1      | 70,000     | Open        |
| 2      | 50,000     | Closed      |
| 3      | 55,000     | Closed      |
| 4      | 60,000     | Closed      |
| 5      | 55,000     | Closed      |
| 6      | 50,000     | Closed      |
| 7      | 50,000     | Closed      |
| 8      | 60,000     | Closed      |
| 9      | 50,000     | Closed      |
| 10     | 5,00,000   | Open        |

#### The Reality of the "Hotshot" Salesman

- Average deal size in pipeline
   = \$100,000
- Deal #10 is of significantly higher value than all the other deals and impacts the average calculation

| Deal # | Deal Value | Deal Status |
|--------|------------|-------------|
| 1      | 70,000     | Open        |
| 2      | 50,000     | Closed      |
| 3      | 55,000     | Closed      |
| 4      | 60,000     | Closed      |
| 5      | 55,000     | Closed      |
| 6      | 50,000     | Closed      |
| 7      | 50,000     | Closed      |
| 8      | 60,000     | Closed      |
| 9      | 50,000     | Closed      |
| 10     | 5,00,000   | Open        |

# Median

## Median

Median: Arrange data in increasing order and find the mid-point  $\frac{(n+1)}{2}$ .

#### The Reality of the "Hotshot" Salesman

- Average deal size in pipeline
   = \$100,000
- Deal #10 is of significantly higher value than all the other deals and impacts the average calculation
- Median = \$55,000 more realistic measure

| Deal # | Deal Value | Deal Status |
|--------|------------|-------------|
| 1      | 70,000     | Open        |
| 2      | 50,000     | Closed      |
| 3      | 55,000     | Closed      |
| 4      | 60,000     | Closed      |
| 5      | 55,000     | Closed      |
| 6      | 50,000     | Closed      |
| 7      | 50,000     | Closed      |
| 8      | 60,000     | Closed      |
| 9      | 50,000     | Closed      |
| 10     | 5,00,000   | Open        |

#### The Reality of the "Hotshot" Salesman

- Average deal size in pipeline
   \$100,000
- Deal #10 is of significantly higher value than all the other deals and impacts the average calculation
- Median = \$55,000 more realistic measure

| Deal # | Deal Value | Deal Status |
|--------|------------|-------------|
| 1      | 70,000     | Open        |
| 2      | 50,000     | Closed      |
| 3      | 55,000     | Closed      |
| 4      | 60,000     | Closed      |
| 5      | 55,000     | Closed      |
| 6      | 50,000     | Closed      |
| 7      | 50,000     | Closed      |
| 8      | 60,000     | Closed      |
| 9      | 50,000     | Closed      |
| 10     | 5,00,000   | Open        |

Median is less susceptible to the influence of Outliers.

# Mode

### Mode

Mode – the most frequently occurring

#### Central Tendency: Example

- Timing for the Men's 500-meter Speed Skating event in Winter Olympics is tabulated.
- The Central Tendency measures are computed below:

| Year | Time  |                  | Year | Time  |                                      | Year               | Time  |              |                     |
|------|-------|------------------|------|-------|--------------------------------------|--------------------|-------|--------------|---------------------|
| 1928 | 43.4  | Mean             | 1988 | 36.4  | Median                               | 36.4               | 1     | Mode         |                     |
| 1932 | 43.4  | =                | 1980 | 38.03 | = (7 <sup>th</sup> + 8 <sup>th</sup> | 50.1               |       | = Value with |                     |
| 1936 | 43.4  | (43.4++36.4)/1   | 1984 | 38.19 | Value)/2                             | 38.03              | 1     | highest      |                     |
| 1948 | 43.1  | 4<br>= 568.53/14 | 1976 | 39.17 | =<br>(40.2+40.2)/2                   | =<br>(40.2+40.2)/2 | 38.19 | 1            | frequency<br>= 43.4 |
| 1952 | 43.2  | = 40.61          | 1972 | 39.44 | = 40.2                               | 39.17              | 1     |              |                     |

| MEDIAN | 40       | 40       |

### Dispersion Measures

**Measures of Dispersion** describe the data spread or how far the measurements are from the center.

## **Spread of Data - Range**

Range = Max - Min

## Spread of Data - SD and Variance

Variance = 
$$\frac{\Sigma(x-\mu)^2}{n}$$

Standard Deviation,  $\sigma = \sqrt{Variance}$ 

## Who's Best?

| Match              | Player A         | Player B         |

#### STANDARD DEVIATION

Player 1 = 1.7873008824606

Player 2 = 3.30823887354653

What is your Decision?????????

A

# Percentile & Quartile

Nth percentile states that there are atleast N% of values less than or equal to this value and (100-N) values are greater or equal to this value

$$i = (N/100)*n$$

- N The percentile you are interested
- n Number of values

#### **Key points**

- 1. If i is decimal then round off to next value
- 2. If i is integer then take average of i and i+1 value

#### Let's calculate 85<sup>th</sup> percentile

#### Data:

3310 3355 3450 3480 3480 3490 3520 3540 3550 3650 3730 3925

Calculate 85<sup>th</sup> percentile?

# Quartile

#### Data:

3310 3355 3450 3480 3480 3490 3520 3540 3550 3650 3730 3925

#### Quartile

Dividing data into  $\frac{1}{4}$  – 4 parts

Q1 – First Quartile – 25<sup>th</sup> percentile

Q2 – Second Quartile – 50<sup>th</sup> percentile (Median)

Q3 – Third Quartile – 75<sup>th</sup> percentile

IQR (Inter Quartile Range) = Q3 - Q1

# Inter Quartile Range

#### Quartile

Dividing data into  $\frac{1}{4}$  – 4 parts

Q1 – First Quartile – 25<sup>th</sup> percentile

Q2 – Second Quartile – 50<sup>th</sup> percentile (Median)

Q3 – Third Quartile – 75<sup>th</sup> percentile

IQR (Inter Quartile Range) = Q3 - Q1

# **Case Study**

In an Under 19 World Cup selection squad for 2018 the BCCI needs to select 1 player based on the current performance in 2017 – 2018 Ranji Trophy. There are 2 players with similar stats and the board is not sure whom to select.

- Can you help the board members with your analysis?

# Stats - Player X & Y

Runs scored by both players in last 14 matches

| Player X | Player Y |
|----------|----------|
| 40       | 35       |
| 20       | 40       |
| ţ        | 7        |
| 20       | 23       |
| 10       | 20       |
| 75       | 26       |
| 100      | 12       |
| 25       | 30       |
| 15       | 27       |
| 15       | 102      |
| 20       | 18       |
| 17       | 7 17     |
| 1:       | 14       |
| Į.       | 7        |

# Measures of association between 2 variables

- 1. Covariance
- 2. Correlation coefficient

#### Covariance

$$Cov(X,Y) = \frac{\sum (X_i - \overline{X})^* (Y_i - \overline{Y})}{n}$$

Higher the value stronger the relation between them

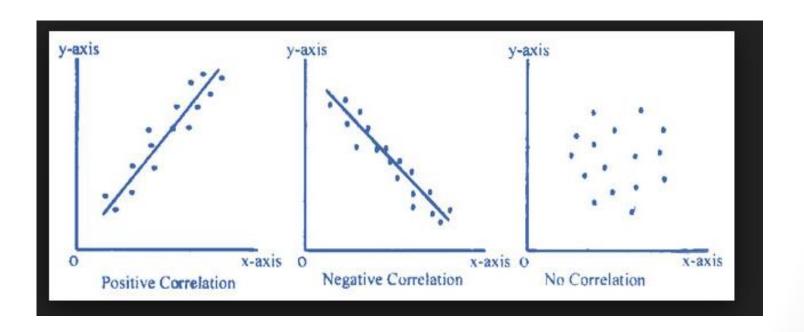

#### **Correlation coefficient**

$$r_{xy} = \frac{\text{Cov}(x, y)}{S_x \times S_y}$$

#### **Key Points**

- 1. A measure of relationship not affected by the units of measurements
- 2. Ranges from -1 to +1

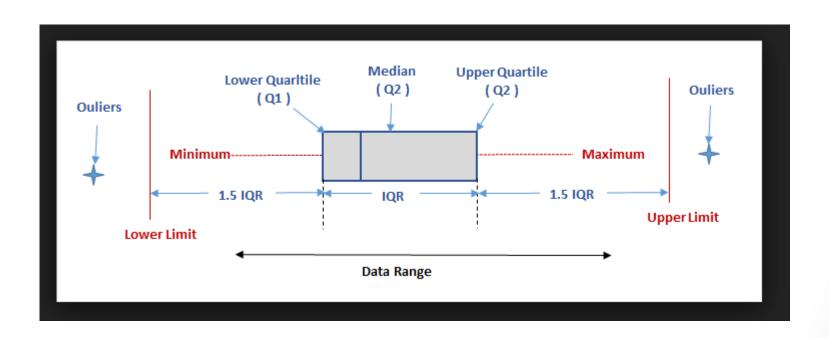

# **Types of Correlation**

#### **Data Visualization - Plots**

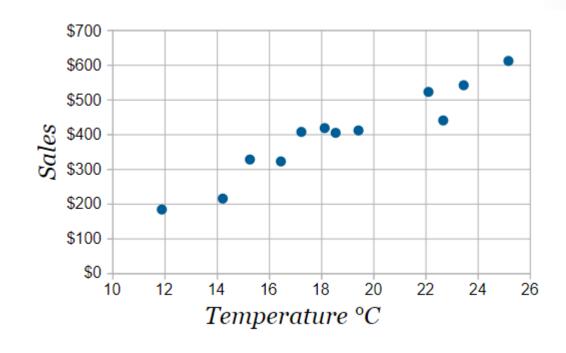

- 1. Box Plot
- 2. Scatter plot
- 3. Density Plot

# **Box Plot -** Shows the data spread for individual columns

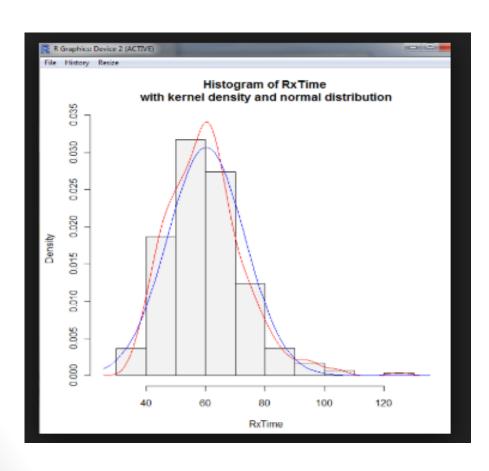

# **Scatter Plot** - Shows relationship between 2 columns

| Ice Cream Sales vs Temperature |                 |
|--------------------------------|-----------------|
| Temperature °C                 | Ice Cream Sales |
| 14.2°                          | \$215           |
| 16.4°                          | \$325           |
| 11.9°                          | \$185           |
| 15.2°                          | \$332           |
| 18.5°                          | \$406           |
| 22.1°                          | \$522           |
| 19.4°                          | \$412           |
| 25.1°                          | \$614           |
| 23.4°                          | \$544           |
| 18.1°                          | \$421           |
| 22.6°                          | \$445           |
| 17.2°                          | \$408           |

# **Density Plot -** Shows the distribution of data

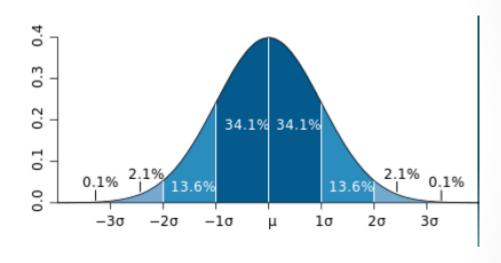

### Statistical simulation link

http://www.shodor.org/interactivate/activities/

### **INFERENTIAL STATISTICS**

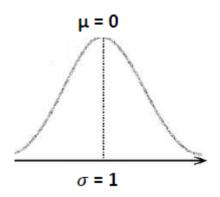

#### Normal Distribution

Mean = Median = Mode

### Standard Normal Distribution

Move the mean  $\mu = 0 \qquad \qquad \mu = 71$  This gives a new distribution  $X-71 \sim N(0,20.25)$ 

 $Z = \frac{X - \mu}{\sigma}$  is called the Standard Score or the z-score.

UON FIRM

# Confidence Intervals and Hypothesis Testing

#### - Two Ways of Inferring the Same

<u>95% CI</u>: Implies that the true population parameter (e.g., mean) will lie within this range  $(\pm 2SE)$  for 95% of the samples. If the sample is in the 5% zone (2.5% in each tail shown in gray), then the true population parameter will not lie in the range  $\bar{x} \pm 2SE$ .

# Critical Region & Significance level

#### **Critical region:**

The region in the tail of the distribution which corresponds to the rejection of the null hypothesis at some chosen significance level.

#### **Z Critical Value:**

The Z value which separates the critical region from the rest of the region in the distribution. Any Z value higher than Z critical value means that the value is in the critical region.

#### **Significance Level:**

The probability level of that is chosen to test the hypothesis testing in statistics. They are 3 levels - 10%, 5%, 1% and normally if this is not provided during testing then **5% is what chosen as a standard**.

# Hypothesis Testing

Hypothesis testing is the explanation of the phenomenon - scientific proof of concept about the event

- 1. Null Hypothesis  $(H_0)$
- 2. Alternate Hypothesis ( $H_a$ )

# Hypothesis Testing Steps

- 1. State null  $(H_0)$  and alternative  $(H_1)$  hypothesis
- 2. Choose level of significance ( $\alpha$ )
- 3. Find critical values
- 4. Find test statistic
- 5. Draw your conclusion
